

ENERGY POLICY

At Suven, we are dedicated to nurturing a future that is sustainable and prioritizes energy efficiency. Our energy management policy is fundamental to our mission of advancing the development and production of pharmaceutical products while minimizing our environmental impact. We put this policy into action by setting objectives in various functions and subjecting them to routine evaluations.

Our primary objectives are to continually improve energy performance and reduce energy usage. We strive to accomplish this by integrating energy-efficient technologies into our operations, advocating for sustainable development, and ensuring a safe and comfortable workplace.

Suven's Energy Management Objectives:

- **Leadership in Energy Efficiency:** Strive to become a leader in energy efficiency among pharmaceutical companies within the sector by adopting new emerging technologies.
- **Operational Efficiency:** Reduce energy usage across all operations to align with our wider business goals, which include improving productivity, ensuring quality, and demonstrating environmental responsibility through reduced carbon emissions.
- **Technological Innovation:** Focus on technological solutions for energy conservation and energy performance improvement.
- **Benchmarking:** Periodically compare the energy use of all facilities within our sites to ensure continual improvement, procure energy-efficient equipment, source energy at the most cost-effective rate and proactively reduce usage where possible, in line with our business objectives, and explore the use of renewable energy sources for reducing Greenhouse gas emissions.
- **Awareness and Engagement:** Create awareness about energy policy amongst employees, customers, suppliers, and other stakeholders, and inspire them to actively participate in the energy performance improvement initiatives.
- **Compliance:** Comply with all relevant statutory and other requirements related to the organization's energy use, consumption, and efficiency.
- **Regular Review and Updating:** Review and update this energy management policy at least once every three years or as needed to adapt to changing business circumstances and identify opportunities for improvement.

By adhering to these principles, we aim to not only meet but exceed energy management system standard's requirements, contributing to a more sustainable future for Suven and the communities we serve.
